

Building Documentation

Accurate drawings of your facility are important for space planning, utilization and constructions projects. If your building documentation is out of date or missing, our teams will produce current CAD drawings with the level of detail necessary for your projects.

Floor Plan Drawings

Your final drawings will represent your building in its exact as-built state. Standard floor plan drawings include:

- Interior and exterior walls
- Doors
- Windows
- Skylights
- Openings
- Stairs
- Built-in features
- Plumbing fixtures
- HVAC components,
- Measurements of all accessible spaces.

Exterior plans will include features such as patios, balconies, and attached structures. Additional details can be included based on the needs of your project.

Fire Evacuation Maps

Your organization needs detailed evacuation plans, available as documents or engraved on durable plastic material to withstand vandalism and abuse.

Elevations

Our drawings provide detail of exterior elements including siding, attached structures, ornamentation, equipment, trim, color, finish notations, dimensions, door and window details.

Interior elevations provide illustration of trim, doors, windows, built-ins, fireplaces, and more.

Life Safety Drawings

We'll provide updated CAD drawings that illustrate smoke and fire walls, doors, laundry chutes, trash chutes, and exit signs. Then, establish links to your current CMMS to provide up-to-date inspection information.

Field Verification

Using advanced laser technology, our teams can verify and update the dimensions of your buildings. You can choose to update existing drawings, or create missing or non-existent drawings.

Digitize Paper Files

Digital formats allow for better representation of your floor plans with an accuracy of up to 1/32". Zoom in on any area of the digital file without losing clarity or details.

Convert your paper files or PDF files to digital DWG or DXF format so you can digitize important paper documents.

Room Numbering

Facilities are often renovating and updating their buildings. When these projects are finished, room numbers often don't make sense. Our team will provide a comprehensive numbering scheme suited to your needs, from one floor to an entire building.

If you need rooms renumbered after renovations or construction projects, we can provide accurate measurements with practical and sequential numbering schemes.
