## How to Navigate your Facility Space from Anywhere

Facility teams need a modern approach to capture mechanical and environmental spaces.

With CMSVR360, your facility teams can:

- Easily get eyes on equipment like fire pump valves, electrical switches and more.
- Virtually tag assets with nameplate information, or what areas they serve.
- Navigate a room and click on assets to show detailed information and work orders.
- Attach PM videos, user manuals and other documents so all staff members have quick, visual access to the resources they need.

Integrating completely with CMS and CMS View, CMS VR360 allows you to see your workload, drill-down and view the workspace so you can gather what you need to complete the job.

## Expedite your Training

With virtual representations of your mechanical room, you can spend less time traveling and more time training.

Even allow the newer members of your workforce to rapidly gain confidence in their new duties.

## Retain and Transfer Knowledge

Capture and display knowledge and insight from your senior technicians so their replacements will have long term access once they retire.

- Tap or click through a virtual instance of your mechanical spaces and view detailed asset information.
- Quickly capture information, like areas served by specific valves.
- Digitize your workforce's years of experience and knowledge that will soon retire.

## Capture your Environments Virtually

- Quickly find the equipment you need on your floorplan without moving from where you are on any tablet, smart phone or computer.
- Our VR scanning process allows for accurate measurements of the space.
