Data Collection

Asset Inventory and Verification

The best CMMS is only as good as your Clinical Engineering asset inventory. Our team will perform a complete facility walkthrough to verify, update, and record your asset information while placing barcoded asset tags on assets, equipment and rooms. We can supply your data in a variety of formats, then load it directly to your CMMS or your fixed asset tracking application.

Barcoding

Easily identify assets in the field with FSI's pre-printed barcode labels. We offer polyester thermal barcode labels composed of white or yellow polyester label stock that are suitable for harsh interior and exterior environments with a high-strength acrylic adhesive. Customize barcodes so nursing staff can easily locate and identify the correct asset number.

Inventory Scope

Use our comprehensive Clinical Equipment checklists so you can determine the type and level of data you would like collected. With our procedure library, you'll be generating PMs within days of the physical collection.

Our field team can place each asset at its current location on your electronic floor plans through CMS View. Paired with mobile devices, your CE staff can easily find and edit asset records from a digital drawing instead of a paper list.

Additional Services

System and Data Optimization

Streamline your reporting and simplify the management of your system with a CMMS tailored to how you work. With 300+ report templates, you can optimize your operations.

We'll review the collected data to ensure that it's 100% accurate and reliable.

CMMS for Clinical Engineering

FSI's Custom Maintenance Software (CMS) is healthcare's leading compliance-oriented CMMS package.

- Manage your maintenance efficiently with extraordinarily simple searching, configurable dashboards, and robust reporting.
- With CMS Tech, your team can use handheld devices, online or offline to easily complete preventive maintenance and unscheduled service on your clinical equipment.
